Expected Attendance: Medical Oncologists, Surgical Oncologists,
Radiation Oncologists, APPs, Residents, Fellows, and Nurses

Hosts

Neil J. Shah, MD, Matthew Dallos, MD

Executive Summary

The OncTox Academy Strategy Summit is an exclusive, multi-specialty gathering designed to advance the safe and effective use of next-generation oncology therapies.

Building on the mission of the OncTox Academy Podcast—a one-of-a-kind educational platform created to bridge the knowledge gap between academic and community oncology—this summit brings together experts from oncology, nursing, pharmacy, and industry to address the rapidly evolving toxicity landscape shaped by novel therapeutics such as ADCs, bispecific antibodies, immune checkpoint inhibitors, CAR-T therapies, and radioligand agents.

As cancer care grows more complex, the need for real-world, practical, and multidisciplinary guidance has never been greater. This summit is dedicated to reviving the art of medicine beyond treatment algorithms by empowering clinicians with actionable tools, frontline insights, and multidisciplinary perspectives that drive smarter, safer oncology practice.

Attendees will engage in interactive discussions focused on early toxicity recognition, patient triage, cross-team communication, and industry-supported resources— providing a comprehensive, 360-degree view of toxicity management. This event also sets the stage for Season One of the OncTox Academy Podcast, outlining its educational vision and the critical role it will play in supporting the oncology workforce.
